

Aquila

trusted election intelligence in real time

Intended Customers

Aquila is a real-time Election Monitoring and Intelligence Platform that enables political parties, election observer groups, media organizations, civil society organizations, and other stakeholders to independently collect, verify, collate, monitor, and analyze election results and incidents across Nigeria.

The platform is not intended to replace the Independent National Electoral Commission (INEC) or any statutory electoral management body responsible for conducting official elections. Instead, it provides an independent platform for collecting, validating, monitoring, and analyzing election results as they become available from the field.

Target Customers

The application is suitable for:

- Political Parties
- Political Candidates³
- Election Monitoring and Observer Groups
- Civil Society Organisations (CSOs)
- Domestic and International Election Observer Missions
- Media Houses
- News Organisations
- Research Institutions
- Non-Governmental Organisations (NGOs)
- Election Situation Rooms
- Academic Institutions
- Government Agencies requiring election monitoring
- Security Agencies (where applicable)
- Private Organisations conducting internal elections

Typical Use Cases

The platform enables customers to:

- Configure election structures before an election.
- Register field agents and election observers.
- Collect Polling Unit results in real time.
- Monitor result submissions from across the country.
- Perform independent result collation at Ward, LGA, State, and National levels.

- Track reporting progress and submission coverage.
- Analyse voting patterns and election statistics.
- Generate dashboards and election reports.
- Compare independently collected results with officially announced results where applicable.
- Maintain a secure and auditable record of all submitted election results.

Features of the App

Location Management

The Location module defines the electoral areas where elections are conducted, votes are cast, and results are collated.

States

- The application comes preloaded with the thirty-six (36) States of Nigeria and the Federal Capital Territory (FCT).
- The Super Administrator can create additional States or Territories if required for future use or system configuration.

Local Government Areas (LGAs)

- The application comes preloaded with all Local Government Areas (LGAs) in Nigeria and the six (6) Area Councils of the FCT.
- Each LGA/Area Council is linked to its respective State or FCT.
- The Super Administrator can create, edit, or deactivate LGAs/Area Councils when necessary.

Senatorial Area

- The application comes preloaded with all senatorial areas in Nigeria
- Each Senatorial Area is linked to respective State or FCT.
- Some LGA/Area Councils are aggregated into their Senatorial Area. And an LGA/Council Area can only belong to one Senatorial Area.
- The Super Administrator can create, edit, or deactivate Senatorial when necessary.

Wards

- The application comes preloaded with all officially recognized Wards for every LGA/Area Council.
- Each Ward belongs to one LGA/Area Council.
- Each Ward is mapped to one Federal Constituency.
- Each Ward is mapped to one State House of Assembly Constituency.
- The Super Administrator can create, edit, or deactivate Wards.

Federal Constituency

- The application comes preloaded with all federal constituencies in Nigeria
- Each Federal Constituency is linked to respective State or FCT.
- Some Wards are aggregated into their Federal Constituency. And a Ward can only belong to one Federal Constituency.

- The Super Administrator can create, edit, or deactivate Federal Constituency when necessary.

State Constituency

- The application comes preloaded with all state constituencies in Nigeria
- Each State Constituency is linked to respective State.
- Some Wards are aggregated into their State Constituency. And a Ward can only belong to one State Constituency.
- The Super Administrator can create, edit, or deactivate State Constituency when necessary.

Polling Units

- Every Polling Unit belongs to exactly one Ward.
- Each Polling Unit stores its name, code, location (latitude/longitude where available), and operational status.
- The Super Administrator can create, edit, or deactivate Polling Units.

Notes

- Unless otherwise stated, features that apply to States also apply to the FCT, except where constitutional differences exist (for example, Governor and State House of Assembly elections)
- References to "LGA" include the six Area Councils of the FCT.
- Only Super Administrators can create or modify the electoral geography.
- Electoral geography is intended to be preloaded from official INEC data and maintained centrally to ensure consistency across all elections.

Political Party Management

The Political Party module manages all political parties participating in elections conducted through the system.

Political Parties

- The application is preloaded with all political parties officially registered by INEC.
- Each political party stores the following information:
 - Party Name
 - Party Acronym
 - Party Code
 - Party Logo
 - Status (Active or Inactive)
- The Super Administrator can create, edit, activate, or deactivate political parties.
- Political parties can only participate in an election when their status is Active.
- Each political party can nominate candidates for positions in accordance with the rules of the election.
- The party logo, name, and acronym are displayed wherever applicable, including candidate nomination, ballot papers, election dashboards, and result collation screens.

Notes

- Political party information is intended to be preloaded from official INEC records.
- Deactivating a political party does not remove its historical participation in previous elections.
- Political parties cannot be deleted if they have participated in one or more elections.

Election Management

The Election Management module provides the functionality required to define elective offices, organize election programmes, create elections, and manage candidate nominations.

The module consists of the following components:

- Position Management
- Election Cycle Management
- Election Management
- Candidate Management

Position Management

The Position Management component defines the elective offices that can be contested within the application.

Positions

The application comes preloaded with the following elective positions:

- President
- Governor
- Senator
- Member, House of Representatives
- Member, State House of Assembly
- Local Government Chairman
- Councillor

Each Position is associated with an Electoral Area Type that determines where the position can be contested.

Position	Electoral Area Type
President	Country

Position	Electoral Area Type
Governor	State
Senator	Senatorial District
House of Representatives	Federal Constituency
State House of Assembly	State Constituency
Local Government Chairman	LGA / Area Council
Councillor	Ward

Features

- View available Positions.
- Create new Positions.
- Edit existing Positions.
- Activate or deactivate Positions.
- Define the Electoral Area Type applicable to each Position.

Business Rules

- Every Position must have one Electoral Area Type.
- Position names must be unique.
- Inactive Positions cannot be selected when creating an Election.

Election Cycle Management

Election Cycles group related Elections conducted within the same election programme.

Examples include:

- 2027 General Election
- 2028 Lagos State Local Government Election

- 2031 General Election

Features

The Super Administrator can:

- Create an Election Cycle.
- Edit an Election Cycle.
- Activate, deactivate, or archive an Election Cycle.
- Define the Election Cycle start date and end date.

Information Captured

- Election Cycle Name
- Description
- Start Date
- End Date
- Status

Business Rules

- Every Election belongs to one Election Cycle.
- Archived Election Cycles are available for reporting but cannot be modified.
- Election Cycles cannot be deleted once Elections have been created under them.

Election Management

An Election represents a single electoral contest for a Position within a specific Electoral Area under an Election Cycle.

Examples include:

- Presidential Election – Nigeria
- Governorship Election – Lagos State
- Governorship Election – Kano State

- Senatorial Election – Lagos West Senatorial District
- House of Representatives Election – Ikeja Federal Constituency
- Local Government Chairman Election – Ikeja LGA
- Councillorship Election – Oregun Ward

Features

The Super Administrator can:

- Create an Election.
- Edit an Election.
- Schedule an Election Date.
- Activate or deactivate an Election.
- Archive completed Elections.

Information Captured

- Election Cycle
- Position
- Electoral Area
- Election Date
- Status

Business Rules

- Every Election belongs to one Election Cycle.
- Every Election must reference one Position.
- Every Election must reference one Electoral Area.
- The Electoral Area selected must match the Electoral Area Type defined for the selected Position.
- Duplicate Elections for the same Election Cycle, Position, and Electoral Area are not permitted.

- Elections with recorded votes cannot be deleted.

Candidate Management

Candidate Management handles the creation, editing and deleting of candidate information participating in an Election.

Features

The Super Administrator can:

- Create Candidates.
- Edit Candidate information.
- Delete Candidates.

Information Captured

- Election
- Political Party
- Candidate
- Candidate Photograph
- Status

Business Rules

- Every Candidate must belong to one Election.
- Every Candidate must belong to one Political Party.
- A Person cannot contest more than once in the same Election.
- Candidates deletion is not permitted if result existing for him/her

General Notes

- Elections inherit their electoral geography from the Location Management module.
- Political Parties participating in an Election must exist in the Political Party Management module.

- Candidate addition is only permitted for active Elections.
- Election uploading are managed in their respective modules after candidate creation has been completed.

User Management

The User Management module controls user accounts, system access, and role-based permissions.

Every user is assigned a role that determines the features and electoral locations they can access.

User Roles

Super Administrator

The Super Administrator has unrestricted access to the entire application.

Responsibilities

- Perform all system functions.
- Configure all system settings.
- Manage electoral geography.
- Manage political parties.
- Manage positions, election cycles, elections, and candidates.
- Create, edit, activate, or deactivate user accounts.
- Assign users to electoral locations.
- View all dashboards, reports, and election results.
- Manage administrators.

Business Rules

- Only one Super Administrator account is permitted in the application.
- The Super Administrator can create or deactivate Administrator accounts.

Administrator

Administrators assist in managing the application.

Responsibilities

- Perform all operational and configuration activities.
- Manage election data.
- Manage users, except Super Administrators and other Administrators.
- View all dashboards and reports.

Business Rules

- Administrators cannot create or modify Super Administrator accounts.
- Administrators cannot create other Administrator accounts.
- Administrator permissions are determined by the Super Administrator.

Election Officer

Election Officers are supervisory users responsible for monitoring election activities and viewing results within their assigned electoral areas.

Responsibilities

- View election dashboards.
- View real-time election results.
- Search results by Electoral Area, Political Party, or Position.
- Monitor result submissions.

Business Rules

- Every Election Officer must be assigned one or more Electoral Areas.
- Access is limited to the assigned Electoral Areas.
- Officers assigned to the National level can view all election results.
- Officers assigned to a State can only view results within that State.
- Officers assigned to an LGA, Ward, or other Electoral Area can only view results within their assigned jurisdiction.

Polling Unit Agent

Polling Unit Agents are responsible for submitting election results for a single Polling Unit.

Responsibilities

- View dashboard information for the assigned Polling Unit.
- Enter election results for the assigned Polling Unit.
- View submitted results for the assigned Polling Unit.

Business Rules

- A Polling Unit Agent can only be assigned to one Polling Unit.
- A Polling Unit Agent cannot submit results for any other Polling Unit.
- Result submissions are recorded with an audit trail.

Field Agent

Field Agents are responsible for monitoring and submitting results from multiple Polling Units.

Responsibilities

- View dashboards for assigned Polling Units.
- Search results by Electoral Area, Political Party, or Position within their assigned Polling Units.
- Enter election results for assigned Polling Units.
- Monitor submission status for assigned Polling Units.

Business Rules

- A Field Agent may be assigned one or more Polling Units.
- Field Agents cannot access Polling Units outside their assigned locations.
- All submissions are recorded with an audit trail.

General Business Rules

- Every user must be assigned exactly one role.
- User access is controlled by both role and assigned electoral locations.
- Users may only perform actions permitted by their assigned role.
- The application shall maintain a complete audit trail of user logins, data changes, and result submissions.
- Inactive users cannot access the application.

Result Management & Live Election Dashboard

The Result Management module enables the collection, publication, collation, monitoring, and visualization of election results in real time.

Results are submitted from Polling Units and automatically collated across the electoral hierarchy to provide live election intelligence.

The module consists of:

- Result Submission
- Result Publication
- Result Collation
- Live Dashboard
- Result Search
- Media & Incident Reporting

Result Submission

Election results are submitted at the Polling Unit level by authorized users.

Authorized Users

- Polling Unit Agent
- Field Agent

Information Captured

- Election
- Polling Unit
- Candidate Votes
- Rejected Votes
- Total Accredited Voters
- Total Votes Cast
- Result Status
- Time of Submission
- Location coordinate (automatically by the device)

Features

- Save Result as Draft.
- Publish Result.
- Edit Draft Result.
- Preview Result before publication.
- View submission history.

Business Rules

- Results are submitted per Polling Unit.
- Draft Results are not included in result collation.
- Only Published Results participate in result collation.
- Published Results may only be modified by authorized users.
- Every submission of the result is recorded in the audit log.
- The GPS coordinates are captured automatically at the point of submitting the result

Media & Incident Reporting

The application allows field users to attach supporting evidence and observations to Polling Unit results.

Supported Media

- Photographs
- Audio recordings
- Video recordings

Additional Information

- Incident Description
- Observation Notes
- Electoral Infractions
- Security Incidents
- Violence or Disruptions
- Other Relevant Comments

Business Rules

- Multiple media files may be attached to a Result.
- Media files remain linked to the submitted Result.
- Media is available to authorized users based on their access level.

Result Collation

Published Polling Unit results are automatically collated across the electoral hierarchy.

Collation is performed at:

- Ward
- Local Government Area (LGA) / Area Council
- Senatorial District
- State
- National

depending on the Position being contested.

Features

- Automatic Result Collation.
- Real-time Vote Aggregation.
- Candidate Ranking.
- Turnout Calculation.
- Reporting Progress.

Business Rules

- Only Published Results are collated.
- Every new Published Result immediately updates all affected collation levels.
- Collation is automatic and requires no manual intervention.
- Historical snapshots are retained for audit purposes.

Live Election Dashboard

The Live Dashboard provides a real-time view of election activities and results.

Information displayed is filtered according to the user's assigned role and electoral location.

Dashboard Features

- Total Polling Units.
- Polling Units Reported.
- Polling Units Pending.
- Percentage Reporting Progress.
- Votes per Candidate.
- Votes per Political Party.
- Leading Candidate.
- Live Result Feed.
- Recent Result Submissions.
- Election Status.
- Incident Alerts.
- Media Upload Notifications.

Visual Components

The dashboard may include:

- Interactive Map.
- Live Bar Charts.
- Pie Charts.
- Line Charts showing reporting progress.
- Candidate Comparison Charts.

- Polling Unit Progress Indicators.
- Geographic Heat Maps.

All dashboard components update automatically whenever a Result is published.

Candidate Watch

Users may select one or more Candidates or Political Parties to monitor.

The dashboard displays:

- Current Vote Total.
- Ranking.
- Percentage of Votes.
- Locations Leading.
- Reporting Progress within those locations.
- Vote Trend.

Result Search

Users can search election results using one or more filters.

Search Filters

- Election Cycle
- Election
- Position
- Political Party
- Candidate
- State
- Senatorial District
- LGA / Area Council
- Ward
- Polling Unit
- Result Status
- Date and Time

Search results are restricted by the user's assigned permissions and electoral locations.

Notifications

The application provides real-time notifications for important election events.

Examples include:

- New Result Published.

- Polling Unit Result Updated.
- Incident Report Submitted.
- Media Uploaded.
- Reporting Milestones Achieved.
- Election Completed.

General Business Rules

- Only authorized users may submit election results.
- Every published Result automatically updates the Live Dashboard.
- Dashboard information is filtered according to user permissions and assigned electoral locations.
- Every Result modification is recorded in the audit log.
- Historical election results remain available for reporting and analysis.

Incident Management

The Incident Management module enables authorized users to report, monitor, investigate, and review incidents that occur before, during, and after an election.

Incidents may be submitted independently of election results and are linked to the relevant Election and Electoral Location.

The module consists of:

- Incident Reporting
- Incident Monitoring
- Incident Search
- Incident Review

Incident Reporting

Authorized users can report election-related incidents from the field as they occur.

Authorized Users

- Polling Unit Agent
- Field Agent

Information Captured

- Election
- Electoral Location (entered by user and coordinate are automatically picked by the device)
- Polling Unit (where applicable)
- Incident Category
- Incident Severity
- Date and Time
- Description
- Reporter
- Current Status

Supported Media

The following evidence may be attached to an Incident:

- Photographs
- Audio Recordings
- Video Recordings
- Supporting Documents

Example Incident Categories

- Violence

- Ballot Box Snatching
- Vote Buying
- Voter Intimidation
- Over Voting
- Under Age Voting
- Polling Unit Not Open
- Late Arrival of Officials
- Late Arrival of Election Materials
- Equipment Failure
- BVAS Failure
- Security Incident
- Protest
- Weather Disruption
- Other

Incident Severity

- Low
- Medium
- High
- Critical

Incident Status

- Draft
- Submitted
- Under Review
- Resolved
- Closed

Features

- Save Incident as Draft.
- Submit Incident.
- Edit Draft Incident.
- Attach multiple media files.
- Capture GPS Coordinates (where available).
- Automatically record submission date and time.

Business Rules

- Incidents may be reported independently of Result Submission.
- Multiple Incidents may be reported for the same Polling Unit.

- An Incident may exist without a published Election Result.
- Every Incident submission is recorded in the audit log.
- Immediately incident is reported the device submit the location coordinate automatically

Incident Monitoring

Authorized users can monitor reported incidents within their assigned Electoral Areas.

Features

- View all reported Incidents.
- View Incident details.
- View attached media.
- Filter by Incident Category.
- Filter by Severity.
- Filter by Status.
- Filter by Electoral Area.
- Filter by Election.
- View Incident Timeline.
- View Incident Location on the map.

Search Filters

Users may search Incidents using one or more of the following:

- Election Cycle
- Election
- Position
- State
- Senatorial District
- LGA / Area Council
- Ward
- Polling Unit
- Incident Category
- Severity
- Status
- Reporter
- Date Range

Business Rules

- Users can only view Incidents within their assigned Electoral Areas.

- National-level users can view all Incidents.
- Attached media is only available to authorized users.
- Every Incident maintains a complete history of updates.

Dashboard Integration

Incident information is integrated into the Live Election Dashboard.

The dashboard provides:

- Total Reported Incidents.
- Incidents by Severity.
- Incidents by Category.
- Incidents by State.
- Recent Incident Feed.
- Critical Incident Alerts.
- Incident Trend Charts.
- Geographic Incident Map.

Dashboard information updates automatically whenever a new Incident is submitted.

General Business Rules

- Incident Management operates independently of Result Management.
- Reporting an Incident does not require a Result Submission.
- Multiple Incidents may be associated with the same Election or Polling Unit.
- Every Incident retains a complete audit trail, including creation time, updates, attachments, and reporting user.
- Historical Incident records remain available for reporting and post-election analysis.
- GPS Coordinates are automatically submitted by the device when incident are submitted.
